

ZBrush 3.5 R3 Read me

This read me file includes some important information about ZBrush, its installation and support.

The installer includes ZBrush itself, its documentation and the official plugins for ZBrush 3.5.

Before starting the ZBrush 3.5 R3, please deactivate your current version of ZBrush 3.5 or ZBrush 3.5 R2, by clicking in the ZPlugins >> Deactivate button and follow the steps.

Installation:

When launching the installer by double clicking on the ZBrush 3.5 Installer.exe, a first step will be for the installer to autoextract itself. On Windows Vista and Windows 7, you may have a notice from the UAC asking you to authorize the installer.

After this first step, you should have the installer welcome screen. Click on the Next button to process the install. Read and accept the End User License Agreement and at the next step, choose between the Complete or Custom install:

Complete - will install ZBrush application and its components, all the plugins and documentation in the default system program files folder.

Custom - will let you choose the location of the installation, the plugins to install and the documentation to install. We recommend you do a custom installation.

The final steps will copy and install all the files. When the installation is finished, press Start > Programs to show the ZBrush folder. Click on the ZBrush shortcut to launch ZBrush and start the activation.

On first launch, ZBrush will need to be executed as an Administrator. Right-click on the ZBrush.exe in the root ZBrush3.5r3 folder and choose Run as an Administrator.

Please, read the included documentation, located in the ZBrush folder for the activation process.

Plugins - short descriptions:

The ZBrush installer includes several plugins. Please, visit our Download Center regularly (<http://www.pixologic.com/zbrush/downloadcenter/>) for more information, updates and new plugins.

Adjust Draw Focus Z Size: This plugin is for adjusting your Draw Size, Focal Shift and Z Intensity without interrupting your workflow.

Decimation Master: With Decimation Master you will be able to easily reduce the polygon count of your

models in a very efficient way while keeping all their sculpted details.

HD Render All: This is a zscript for rendering all SubTools with HD Geometry if it's used. It makes it possible to use perspective for the render.

Image Plane: Image Plane 3 provides an easy way to load images into ZBrush for use in texturing, either using ZProject brush polypainting, or with Projection Master.

3D Printing Exporter: With 3DPrint Exporter you will be able to export your favorite ZTool in STL and VRML file format, opening you to the world of the 3D Printing.

SubTool Master: SubTool Master allows you to mirror, duplicate, merge, export all your SubTools at once, fill all yourSubTools with color and/or materials and many other things!

Turntable Plus: Turntable Plus is designed to add some extra functionality to the ZBrush movie palette: Pan and zoom while recording a turntable, Adjust 3D Layer intensity to morph from one shape to another and Render HD Geometry for a movie/turntable.

Transpose Master: Transpose Master allows you to pose a model with multiple SubTools by creating one combined model of the lowest resolution level of each SubTool.

ZAppLink: ZAppLink 3 is a ZBrush plugin that allows you to seamlessly integrate your favorite image editing software into your ZBrush workflow.

PaintStop: PaintStop configures your user interface and settings to give you the true-to-life feel of using real world 2D art tools.

Technical support <http://support.pixologic.com>

Please, for all your installation and licensing requests and problems, visit our Support Center and open a Ticket. Most enquiries are processed within 24 hours during the business days.

Our technical support team process only English language tickets. Other languages may be translated through an automatic translation system, resulting in a long delay in processing and possibly inaccurate replies.

Be sure to register on our Support Center even if you don't need to contact our Technical Support team, as we send out new announcements and software updates to our registered users first.
